Checklist of Turkish Coccoidea (Hemiptera: Sternorrhyncha) species

Türkiye'nin Coccoidea (Hemiptera: Sternorrhyncha) kontrol listesi

M. Bora KAYDAN^{1*} Selma ÜLGENTÜRK² Lerzan ERKILIÇ³

Summary

The Superfamily Coccoidea (Hemiptera: Sternorrhyncha) or scale insects, contains many agricultural pests throughout the world. The last checklist for Turkey was published in 2007, and included 267 species in 12 families. Here we update the list which now has 359 species belonging to 134 genera in 18 families. These species mainly show a Palaearctic distribution. The family Diaspididae is the most abundant with 134 species in 42 genera, followed by Pseudococcidae with 101 species in 32 genera, and Coccidae with 67 species in 28 genera. The other families have: Eriococcidae (12 genera, 29 species), Asterolecaniidae (3 genera, 11 species), Kermesidae (2 genera, 11 species), Margarodidae (2 genera, 5 species), Monophlebidae (3 genera, 3 species), Matsucoccidae (1 genus, 2 species), Putoidae (1 genus, 4 species), Rhizoecidae (1 genus, 4 species), Cerococcidae (1 genus, 1 species), Leconodiaspidae (1 genus, 1 species), Dactylopiidae (1 genus, 1 species), Marchalinidae (1 genus, 1 species), Micrococcidae (1 genus, 1 species) Ortheziidae and (1 genus, 1 species) Phoenicococcidae (1 genus, 1 species).

Key words: Coccoidea, scale insect, checklist, Turkey.

Özet

Coccoidea üstfamiliyası (Hemiptera: Sternorrhyncha) tüm dünyada birçok zararlı türü sahiptir. Türkiye'de bulunan coccoid'lerin kontrol listesi en son 2007 tarihinde yayınlanmış olup liste 12 familyaya bağlı 267 tür içermektedir. Bu çalışmada kontrol listesi 18 farklı familyaya bağlı 134 cins içerisinde bulunan 359 tür olacak şekilde güncellenmiştir. Türkiye'de bulunan coccoid'lerin çoğunluğu Palaearktik Bölge'de dağılım göstermektedir. Tür sayısı bakımından Daispididae familyası 42 cinse bağlı 134 tür ile en çok türü barındıran familya iken bunu 32 cinse bağlı 101 tür ile Pseudococcidae familyası ve 28 cinse bağlı 67 tür ile Coccidae familyası takip etmektedir. Diğer familyalar Eriococcidae (12 cins, 29 tür), Asterolecaniidae (3 cins, 11 tür), Kermesidae (2 cins, 11 tür), Margarodidae (2 cins, 5 tür), Monophlebidae (3 cins, 3 tür), Matsucoccidae (1 cins, 2 tür), Putoidae (1 cins, 4 tür), Rhizoecidae (1 cins, 4 tür), Cerococcidae (1 cins, 1 tür), Leconodiaspidae (1 cins, 1 tür), Dactylopiidae (1 cins, 1 tür), Marchalinidae (1 cins, 1 tür), Micrococcidae (1 cins, 1 tür) Ortheziidae and (1 cins, 1 tür) Phoenicococcidae (1 cins, 1 tür) olarak listelenmiştir.

Introduction

Turkey with 779.000 km² plain, lies among Asia, Africa and Europe, surrounded by sea at its three sides (Black Sea, Mediterranean Sea and Aegean Sea) with different ecological characteristics, with very different altitudes from sea level to above 5000 meters. These conditions results in a very big variety of climatic conditions in all over the country. Three different biogeography regions namely Europe-Siberia (Kars-Erzurum plate), Iranian-Turan (from eastern part of Turkey till Middle Anatolia), and Mediterranean are found in Turkey. Furthermore, these regions shows different types of ecosystems including transition between zones. Although the most important ecosystems are steps in the country, territory consist forests, mountains, wetlands, coastal and marine ecosystems and different combinations of these systems. This diverse of several different ecological characteristics provides raising areas for thousands of fauna and flora species and their populations.

In last decades, there is increasing rates of phytophagous insect's invasions in different parts of the world due to climate change and increased trade and travel between and within continents. For instance Mattson et al. (2007) indicated that more than 40% of the major North American pest species are coming from exotic places and more than 2000 insect species are coming from Europe, the Middle East and North Africa. It is believed that long-distance dispersal of alien species to new areas are caused by direct or indirect result of human activities such as agriculture, forest management, and distribution of ornamental plant and using exotic plants for gardening and urban landscape management, thus creating new sites for colonization of alien species. Although there are 109 exotic invasive species which successfully invaded and established woody plants in Europe (Mattson et al., 2007) there are several more important pest species that can be harmful for field crop and industrial plant species. Recently several species of economically important scale insect species (especially mealybugs such as *Pseudococcus comstocki* (Kuwana), *Phenacoccus madeirensis* Green, *Phenacoccus solani* Ferris, *Phenacoccus solenopsis* Tinsley *Phenacoccus peruvianus* Granara de Willink, and *Pseudococcus elisae* Borchsenius) have been introduced into different regions in the world (Pellizzari & Germain, 2010; Beltra et al., 2010).

The Superfamily Coccoidea contains many agricultural pests throughout the world. The first comprehensive detailed study on scale insect fauna of Turkey was made by Bodenheimer (1952, 1953). Çanakçıoğlu (1977), Kozár et al. (1976), Uygun et al. (1998), Önder et al. (2000), Ülgentürk (2002), Ülgentürk & Çanakçıoğlu (2004), Ülgentürk et al. (2003, 2004), Kaydan et al. (2001a, b, 2002, 2004, 2005 a, b) have made several additions records in the scale insect fauna. The last checklist which includes 267 species in 12 families for Turkish Scale Insect Fauna was published in (2007) by Kaydan et al. After that several new studies were conducted and published by several authors on scale insect fauna in Turkey, such as Danzig et al. (2012), Kaydan et al. (2008), Kaydan & Kozár (2010a, b; 2011a, b), Kaydan & Gavrilov (2010), Erkiliç et al. (2011), Kaydan (2011), Kaydan et al. (2013), Ülgentürk et al. (2012), Ülgentürk & Kozár (2011), Kaydan et al. (2013), Ülgentürk & Pellizzari (2013) and Yiğit & Telli (2013) recorded many new scale insect species for Turkish Scale Insect fauna. For this reason this paper deals with new scale insect records in Turkey, their hosts and geographical distribution in Turkey.

Result and Discussion

Because of the geographical position of Turkey, affects of different climate of different sub-geographical regions and effects of the different altitudes from sea level to 5000 meters the species richness for both plants and animals is very high in Turkey. For this reason the insect species richness of Turkey is always dynamic and it is thought that this increasing will be continuing in future.

Here we update the list which now has 359 species belonging to 134 genera in 18 families. The number of scale insect species in Turkey has increased by 90 (one third of previous list) in last seven years. Although these species mainly show a Palaearctic distribution, 65 of them are regarded as cosmopolitan species. These cosmopolitan species are occur either in the Mediterranean geographical zone such as Mediterranean, Aegean, Marmara and Black Sea regions in Turkey because of Subtropical climate aspects or in greenhouse or indoor (very few insect such as *Dysmicoccus brevipens* and *P. bambusae* found in door plants only). The family Diaspididae is the most abundant with 134 species in 42 genera, followed by Pseudococcidae with 101 species in 32 genera, and Coccidae with 67 species in 28 genera. The other families have: Eriococcidae (12 genera, 29 species), Asterolecaniidae (3 genera, 11 species), Kermesidae (2 genera, 11 species), Margarodidae (2 genera, 5 species), Monophlebidae (3 genera, 3 species), Matsucoccidae (1 genus, 2 species), Putoidae (1 genus, 4 species), Rhizoecidae (1 genus, 4 species), Cerococcidae (1 genus, 1 species), Leconodiaspidae (1 genus, 1 species), Dactylopiidae (1 genus, 1 species), Marchalinidae (1 genus, 1 species), Micrococcidae (1 genus, 1 species) Ortheziidae (1 genus, 1 species) and Phoenicococcidae (1 genus, 1 species) (Table 1). In the table one we organized distribution of the species according to 7 different regions in Turkey; namely Mediterranean Region (1), Eastern Anatolian Region (2), Aegean Region (3), South-East Anatolian Region (4), Black Sea Region (5), Marmara Region (6) and Central Anatolian Region (7). On the other hand cosmopolite species are marked by asterisk (*). By the way in case of we could not have information about the species we marked with (?).

In this study we just wanted to consider the current scale insect species in Turkey but not discuss the zoogeographical aspect of the species. Because of the fact about the zoogeographical position of Turkey we are expecting much more species in Turkey in near future.

Table 1. Scale insect species of Turkey

Species	Host plant	Distribution
ASTEROLECANIIDAE		
Asterodiaspis		
1. <i>A. bella</i> (Russell)	<i>Quercus</i> sp.	2, 7
2. <i>A. hadzibeyliae</i> Borchsenius	<i>Quercus</i> sp.	7
3. <i>A. ilicicola</i> (Targioni Tozzetti)	<i>Quercus</i> sp., <i>Q. coccifera</i>	1, 3, 6
4. <i>A. mina</i> (Russell)	<i>Quercus</i> sp.	2
5. <i>A. quercicola</i> (Bouche)*	<i>Quercus</i> sp., <i>Q. branti</i>	1, 3, 7
6. <i>A. repugnans</i> (Russell)	<i>Quercus</i> sp.	2
7. <i>A. variolosa</i> (Ratzeburg)*	<i>Quercus</i> sp., <i>Quercus aegilops</i> , <i>Q. coccifera</i>	1, 2, 6
Planchonia		
8. <i>P. arabisidis</i> Signoret*	<i>Crambe</i> sp.	7
9. <i>P. zanthenes</i> (Russel)	?	?
Pollinia		
10. <i>P. pollini</i> (A. Costa)	<i>Olea</i> spp., <i>O. europaea</i>	1, 3, 4
CEROCOCCIDAE		
Cerococcus		
11. <i>C. perowskiae</i> Archangelskaya	<i>Artemisia</i> sp., <i>A. fragrans</i>	?
COCCIDAE		
Acanthopulvinaria		
12. <i>A. orientalis</i> (Nasonov)	<i>Noae</i> sp., <i>N. mucronata</i>	2, 7
Anapulvinaria		
13. <i>A. pistaciae</i> (Bodenheimer)	<i>Pistacia atlantica</i> , <i>P. terebinthus</i> , <i>P. vera</i>	1, 2, 4, 6, 7
Bodenheimera		
14. <i>B. rachelae</i> (Bodenheimer)	<i>Vitex agnus-castus</i>	1, 7
Ceroplastes		
15. <i>C. floridensis</i> Comstock*	Polyfag on ornamentals and fruits, <i>Cedrus libani</i>	1, 2, 3
16. <i>C. japonicus</i> Green	<i>Acer negundo</i> , <i>A. pseudoplatanus</i> , <i>Aesculus hippocastaneum</i> , <i>Hedera helix</i> , <i>Laurus nobilis</i> , <i>Morus alba</i> , <i>Malus filibarbunda</i> , <i>Nerium oleander</i> , <i>Pistacia</i> sp., <i>Ulmus campestre</i>	6
17. <i>C. rusci</i> (Linnaeus)*	Polyfag on ornamentals and fruits	1, 3
18. <i>C. sinensis</i> Del Guerchio*	Polyfag on ornamentals and fruits, <i>Actinidia deliciosa</i>	5

Table 1. (Continued)

Coccus		
19. <i>C. hesperidum</i> Linnaeus*	Polyfag on ornamentals and fruits, <i>Cedrus libani</i> , <i>Pinus</i> sp.	1, 5, 6, 7
20. <i>C. pseudomagnolarium</i> (Kuwana)*	Polyfag on ornamentals and fruits	1, 2, 3, 6, 7
Didesmococcus		
21. <i>D. unifasciatus</i> (Archangelskaya)	<i>Prunus persicae</i>	2
Eriopeltis		
22. <i>E. festucae</i> (Boyer de Fonscolombe)	<i>Alopecurus myosuroides</i> , <i>Agropyron</i> sp., <i>A. repens</i> , <i>Festuca</i> sp.	2, 7
Eucalymnatus		
23. <i>E. tessellatus</i> (Signoret)*	<i>Phoenix</i> sp.	7
Eulecanium		
24. <i>E. ciliatum</i> (Douglas)	<i>Jasminum fruticans</i> , <i>Acer campestre</i> . <i>A. pseudoplatanus</i> , <i>Crataegus monogyna</i> , <i>C. oxyacantha</i> ., <i>Ribes</i> sp., <i>Cydonia</i> sp., <i>Malus</i> sp.	7
25. <i>Eulecanium cerasorum</i> (Cockerell)	<i>Quercus</i> sp., <i>Q. robur</i>	7
26. <i>E. ficiphilum</i> Borchsenius	<i>Ficus carica</i>	2
27. <i>E. pistaciae</i> Borchsenius	<i>Pistacia</i> sp.	2
28. <i>E. rugulosum</i> (Archangelskaya)	<i>Prunus persica</i>	1
29. <i>E. takachihoi</i> (Kuwana)	<i>Vitex agnus-castus</i>	1
30. <i>E. tiliae</i> (Linnaeus)	Polyfag on ornamental and fruits	1, 2, 6, 5, 7
31. <i>E. transvittatum</i> (Green)	<i>Acer negundo</i>	7
Exaeretopus		
32. <i>E. agropyri</i> (Hadzibejli)	<i>Poa bulbosa</i>	7
33. <i>E. formicetcola</i> Newstead	<i>Aegilops</i> sp., Poaceae	2, 7
34. <i>E. tritici</i> Williams	<i>Bromus tectorum</i> , <i>Triticum vulgare</i>	2, 7
Filippia		
35. <i>F. follicularis</i> (Targioni Tozzetti)	<i>Fraxinus</i> sp., <i>Jasminum</i> sp., <i>Olea</i> sp., <i>Olea europaea</i> , <i>Phillyrea</i> sp., <i>Pyrus communis</i> , <i>Viburnum</i> sp., <i>Viscum album</i>	1, 3, 6, 7
Lecanopsis		
36. <i>L. turcica</i> (Bodenheimer)	<i>Agropyron</i> sp.	7
37. <i>L. subterranea</i> (Gomez-Menor Ortega)	Poaceae	2
38. <i>L. taurica</i> Borchsenius	Poaceae	2
Lichtensis		
39. <i>L. viburni</i> Signoret	<i>Viburnum</i> sp., <i>V.iburnum tinus</i> , <i>Hedera helix</i> , <i>Olea oleaster</i> , <i>Phillyrea</i> sp.	3, 6
